

It was there. You just didn't know it was there.

Pharmagene Indication Switch™

You may develop a new compound for one therapeutic purpose. And end up with something quite different. This novel therapeutic indication was always available to you. But you'd never had known it if it hadn't been revealed.

This is exactly the role of Pharmagene's Indication Switch.™ When one therapeutic route fails in testing, the system immediately identifies alternative uses for your product. What starts as a treatment for hypertension may end as a remedy for impotence (as we have seen).

The benefit to you can be enormous, Indication Switch™ can bring a compound, quite literally back from the dead. Protecting your investment. Saving time and resources. Revealing the full potential of your product.

The ingenious Indication Switch.™ It's here. And now you know it's here.
